Example output with highlighted INFO
Flag is
VAR is
Example ERROR
Some timeout to demonstrate time measurement: .....

Finished 2024-08-26 20:05:43
Duration 3 sec

martin@Apocalypse bashtemplate %
```

## Usage

1. Rename "bashtemplate" to whatever scriptname you want
2. Search for all "TODO" in the File and adjust the script
3. Make the script executable via "chmod +x scriptname"
4. Run your script via "./scriptname"

## Background

This script helps you with:

- Display of name and version
- Checking for needed tools
- Handling of commandline parameters
- Measuring used time
- ASCII coloring of output
- Warning about empty variables
- Debugging output (if needed)
